

Gulf Controls Company Successfully Transitions to ISO 9001:2015 Certification

Tampa, Florida – On December 29, 2017, Gulf Controls Company, Inc. (GCC) announced that it successfully transitioned to the ISO 9001:2015 standard. GCC is a leader in providing fluid power equipment throughout Florida, Southern Georgia and Puerto Rico.

The ISO 9001 quality management system maximizes business processes and efficiencies. The latest standard increases focus on continuous improvement and requirements for top management to be involved and accountable. ISO 9001:2015 requires a stronger focus on performance than the previous version, due to the combination of process approach with risk-based thinking. GCC's transition to the latest standard assures their clients consistently good quality products and services, and distinguishes GCC from other suppliers in their industry.

President of GCC, Mr. John Flieman III stated, "We are extremely proud of our successful transition to the ISO 9001:2015 certification. Our hard work and dedication to deliver the highest quality of products and services to our customers can only be further enhanced with this latest transition."

Gulf Controls has the knowledge in hydraulics, pneumatics, fluid conveyance and automation to provide world-class products and complete fluid power systems for its customers. GCC is part of EOHI, a 100% employee owned company based in Houston, Texas, which is also the parent of Hydraquip, Inc., Supreme Integrated Technology, Inc., and Elite Controls, Inc.
